

Warehouse-IT

Warehouse-IT is a warehouse management System designed to manage all the operations within a warehousing environment. The Warehouse-It system can be setup to run in 2 modes:

- **Serial No. Mode**
 - *This mode uses a unique serial no for each item that is entering or leaving the warehouse. This mode would suit companies warehousing unique products that need to be tracked\monitored individually. (e.g.: Computer parts.)*
- **Batch Mode**
 - *This mode does not distinguish between products of the same type and simply use the QTY variable to control stock. This would suit companies warehousing bulk items that do not need to be tracked\monitored individually. (e.g.: Plastic bottles)*

Below are some of the key features of the Warehouse-IT system

- *GRN Management*
- *Dispatch Management*
- *Multiple warehouse\item management*
- *RFT*
- *Print picking slips and delivery notes*
- *Stock control*
- *Item tracking*
- *Stock movement tracking*
- *Serial No. tracking*
- *Faulty items tracking and reporting*
- *Bulk item re-location*
- *Comprehensive reporting*
- *Financials*
- *Broking Module*
- *Barcoding and handheld scanner interface.*
- *SMS interface*
- *Stock Variances*
- *Document Imaging*
