## FREIGHT MANAGEMENT SYSTEMS

Increasing customer service with systems technology

Kuepper International is a South African based software development house specializing in the Logistics Industry.

Having developed over 100 systems worldwide in the Freight, Courier, Warehouse, On Line Tracking, Banking, Telecommunications and Travel sectors we have the know-how to effectively streamline your business processes.

Our development and management team are highly experienced throughout these sectors and are constantly evolving our products to make the most of modern technology and new system models. Using technologies such as vb.net, c#, asp.net, Visual basic, SQL Server and MS access we can custom develop any IT solution to match your budget.

Our Flagship systems are the Winfreight and Warehouse-It systems.

### • WINFREIGHT

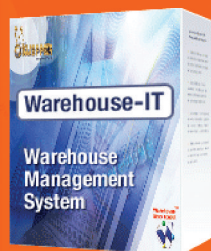

Winfreight is a freight management system developed to effectively control all the daily operations within the logistics industry. The system centralizes all data input across the different function areas into a single system, making it easier for business owners/managers to control the flow of data within their business.

### • WINFREIGHT ONLINE

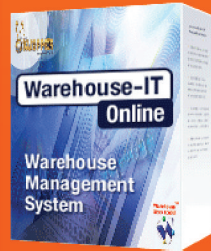

The Winfreight Online system is an internet based processing \ tracking system that plugs into any of our Winfreight versions, and can also be used as a standalone system. The system is entirely internet based; eliminating the need for any installation \ configuration, all that is needed is an active internet connection.

### • WAREHOUSE-IT

Warehouse-IT is a warehouse management System designed to manage all the operations within a warehousing environment. The system allows users to track all items entering and leaving your warehouse and get real-time reports on stock levels.

### • WAREHOUSE-IT ONLINE

The warehouse-IT online system plugs into any of our warehouse-IT systems and allows clients to login to the system via the internet and view\manage their warehouses. Clients can only view warehouses relating to their login credentials. The warehouse-IT online system is extremely powerful and remains at the forefront of online data warehousing technology. It can be used by an existing warehousing company that wants to give their clients complete visibility of their products being warehoused, or by a retailer who wishes to advertise & sell their products via the e-commerce model.
